DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-3, and 14-17 are rejected under 35 U.S.C. 102(e) as being anticipated by Wolrich et al U.S. Patent Number 7,023,844.

Re Claims 1, 14, 15, 17, fig. 3 teaches a plurality of inputs 40a (a plurality of data connections); a plurality of MUX logics 47 connected in stages (a first stage logic) configured to receive words from input logics 40a, a INPUT ready logic selects the MUX logics to selective select the words from the 40a from a plurality of inputs (See col. 3, lines 35+).

Re Claim 2, refer to Claim 1, wherein MUX logics are connected in stages.

Re Claim 3, refer to Claim 1, wherein the selected word is connected to system bus.

Re Claim 16, fig. 3 implemented in IC.

Allowable Subject Matter

3. Claims 4-7, 18-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

In combination with claims 1, 2, 5, prior art fails to teach the Multiplexer circuit comprising first and second tri state driver that enable if a data connection exclusion signal is asserted.

4. Claims 8-13 are allowed.
